

EviCT Source Preprocessing and Geometry Validation

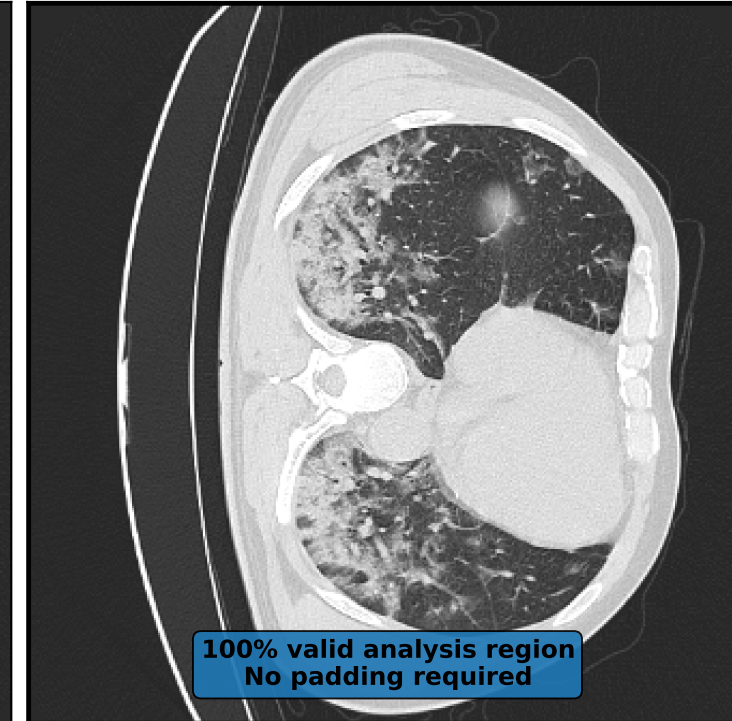

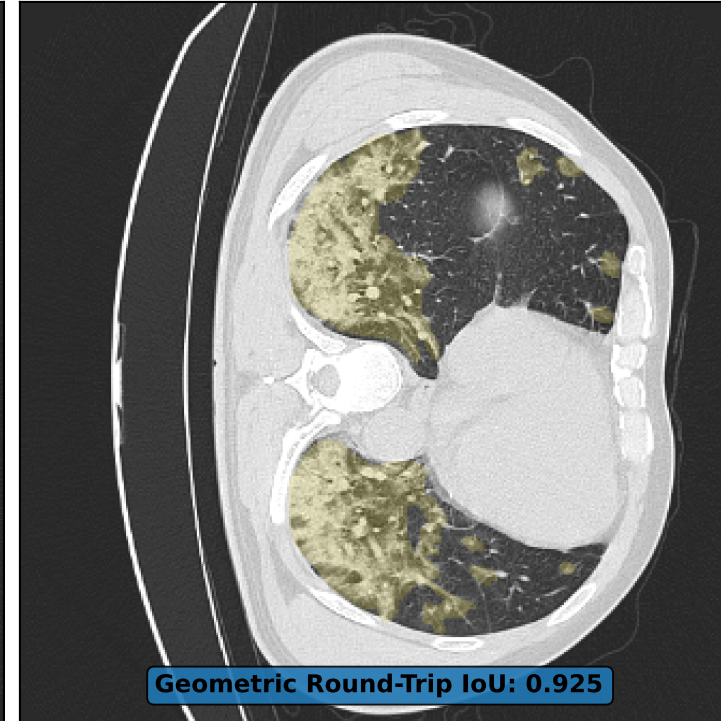

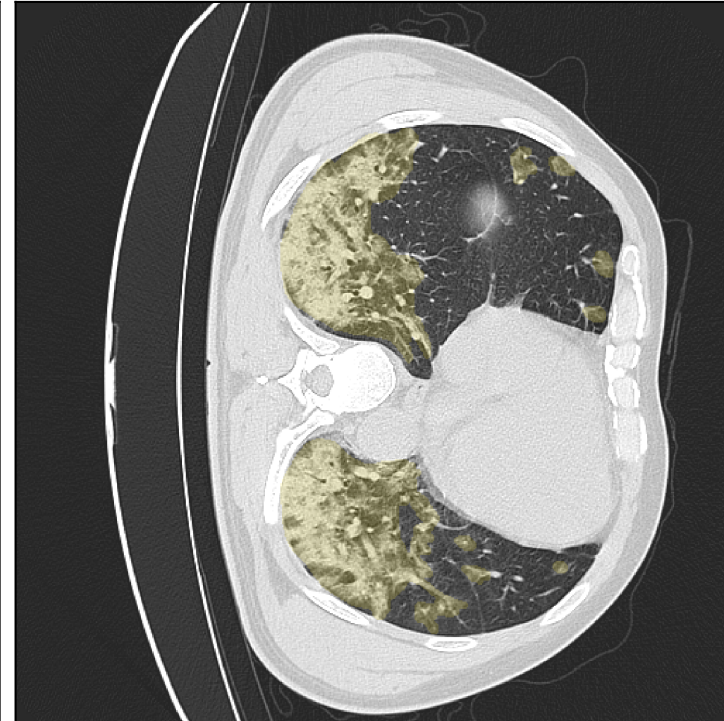

Representative SegDB-2 Cases from Both Acquisition Provenance Groups

(A) Normalized Source CT

(B) Reference Lesion Annotation

(C) Preprocessed CT and Resampled Annotation

(D) Analysis Region and Padding

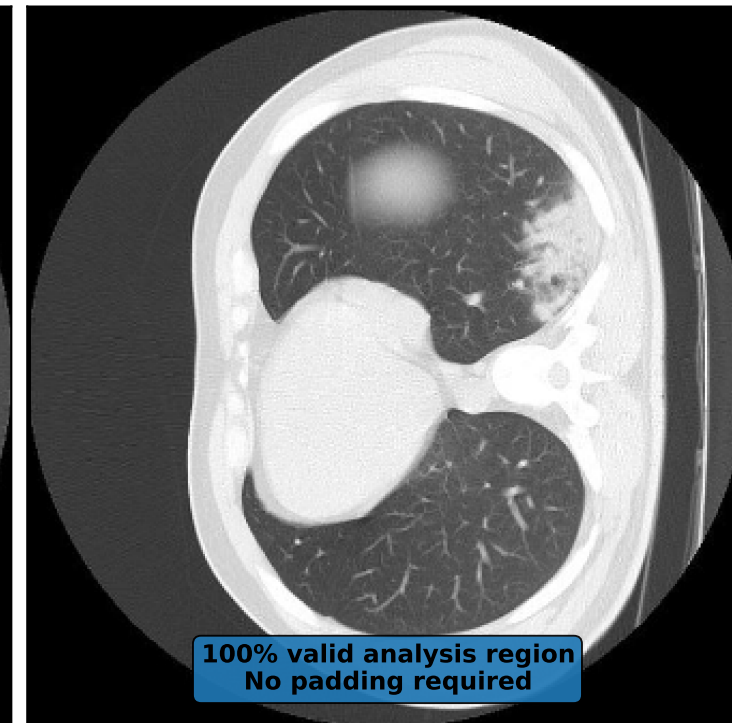

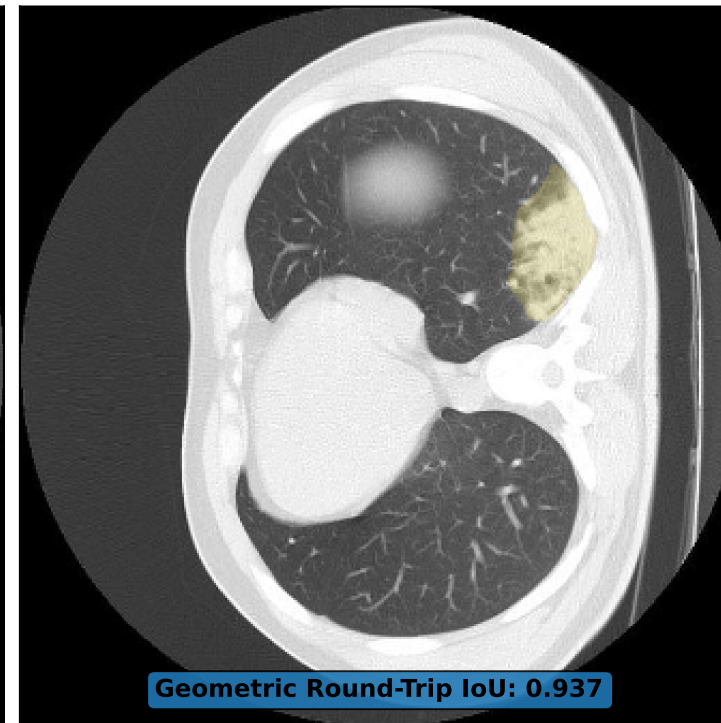

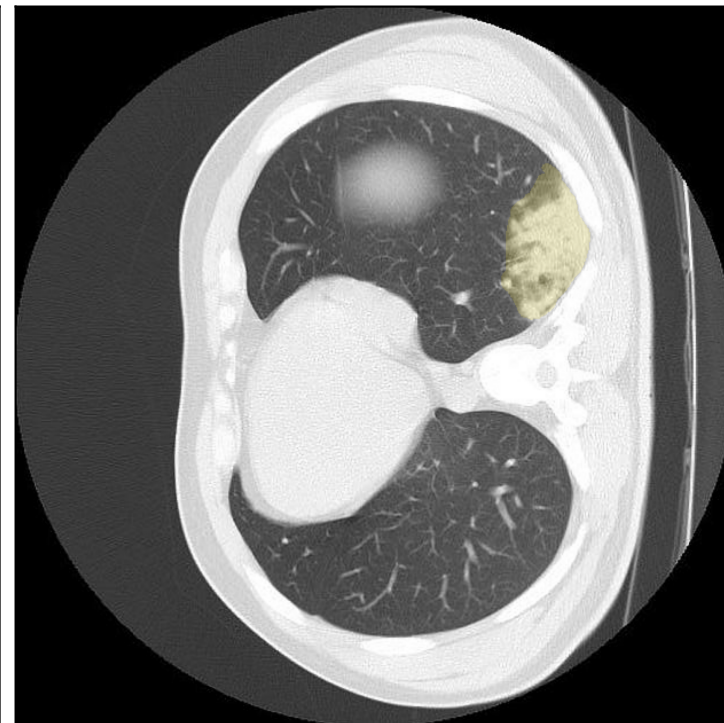

(E) Normalized Source CT

(F) Reference Lesion Annotation

(G) Preprocessed CT and Resampled Annotation

(H) Analysis Region and Padding

Reference annotations are shown only for source-side preprocessing quality control. The analysis-region panel identifies image pixels eligible for loss and metric computation; padding, when present, is excluded.
